# **Environmental Quality of Savar Pourasava : A Geographical Analysis**

**Submitted by**

**Tahera Dil Afroz**

**Registration No.: 89**

**Session: 2012-2013**

**Under the Supervision of**

**Md. Sofi Ullah**

**Associate Professor,**

**Department of Geography and Environment**

**University of Dhaka, Dhaka-1000,**

**Bangladesh.**

## **Declaration**

I do hereby declare that the research work done by me entitled, ‘Environmental Quality of Savar Poursava: A Geographical Analysis’ is an original work for the degree of Master of Philosophy (M.Phil.) under the supervision of Md. Sofi Ullah, Associate Professor, Department of Geography and Environment, University of Dhaka..

This thesis or any part of it has not been previously submitted elsewhere for the award of any Degree, Diploma or Certificate.

---

**Tahera Dil Afroz**

Registration No.: 89

Session: 2012-2013

Department of Geography and Environment, University of Dhaka.

## **Certificate of Supervisor**

The thesis titled ‘Environmental Quality of Savar Poursava: A Geographical Analysis’ is submitted by Tahera Dil Afroz, Registration No: 089, Session: 2012-2013 has been accepted as satisfactory in partial fulfillment of the requirements for the degree of Master of Philosophy (M.Phil.) from the Department of Geography and Environment, University of Dhaka.

This research work has been carried out under my supervision.

---

**Supervisor (Md. Sofi Ullah)**  
Associate Professor,  
Department of Geography and Environment,  
University of Dhaka.

## **Acknowledgement**

I think the obvious first person to thank is Associate Professor Md. Sofi Ullah without whom this entire thesis would not exist, and so I would like to thank him for being my supervisor. On a more personal level I am grateful for his ideas, patience and guidance, but most importantly his ability to teach and the enthusiasm he bestows upon others.

I would like to thank all the members of Bangladesh Space Research and Remote sensing Organization

(SPARRSO), BBS, Savar Poursava Office for their cordial support by providing land use data, map, information and others research materials.

I am very grateful to my beloved husband Md. Mahmudul Haque for his continuous support and stimulating conversations over many points about this thesis. I am also grateful to my sisters specially Taslima Tahrim, for her unbelievable support.

I am very much thankful to Md. Amran Hossan for giving his continuous support in GIS lab to produce study area map, land use map and models. I will remain ever grateful to all the staff members of the Department of Geography and Environment, University of Dhaka for their continuous support to fulfill the session whether it was through the power of positive thinking, encouragement, ability to listen, kindness, endless geographical knowledge, or even flip cup abilities, you all played an important role in making my time here a positive experience.

The biggest of all my acknowledgements goes to my parents Md. Abu Taher and Afoza Akter for getting me here and finally special gratitude to the Almighty Allah for making me able to complete this thesis successfully.

## **Dedication**

This thesis is dedicated to my respected parents who always give their effort in every step of my success

## **Abstract**

The study aims at identifying the overall environmental quality of Savar Pourasava. Different types of environmental pollution are recognized along with their major causes and levels of severity. With the increasing amount of urban sprawl of Dhaka in recent years, the peripheral cities around Dhaka are increasingly becoming urbanization and industrialization hotspots. There is however a deterioration of overall environmental quality accompanied with the fast development. The overall quality of air, water, soil and also the sound level were also assessed as part of the study. The study tried to recognize the major parameters of environmental quality by assessing their causes and assessing the level of severity. The spatial distribution of severity of these parameters was also recognized as part of the findings.

The overall methodology followed a series of steps including both collection of primary and secondary data. Primary data collection was conducted by a detailed questionnaire survey to assess the levels of severity, the types of pollutions and their associated environmental impacts. A sample size of 267 questionnaire surveys was estimated keeping a 95% confidence limit and error of 6%.

Land use change analysis between 1981 to 2017 was generated using satellite image classification. Spatial analysis of severity was conducted using two separate weighted overlay techniques, firstly using equal weights for all pollutions and secondly using weight according to the causal factors of pollution.

Major results of the study may be summarized as follows. From spatial analysis of severity, it is seen that ward numbers 1, 6 and 9 are most susceptible to pollution with severity levels of 4 in a 1 to 5 scale, that indicates that these wards have high levels of severity. The overall distribution shows that the wards that are on the peripheral area of the Pourasava have higher levels of pollution. From Land use change analysis it is seen that both the amounts of vegetation and water in the area has decreased by 35% and 23% respectively between 1981 and 2017. Therefore, the study first identified the environmental problem and then further identified the particular environmental problems in details. According to the assessment of people's perception, the level of water, air, sound and soil pollutions is increasing in the Pourasava. Disposal of solid waste, chemical disposals and also leakages in sewerage lines have been identified as key causes of water pollution. Open incineration and solid waste disposal are identified to be key reasons for air pollution. Faulty vehicles and hydraulic horns contribute most to sound pollution. Land fill sites are identified to cause the greatest amounts of soil pollution. Detergent production industries and dyeing industries are identified as causing the maximum pollution from industries. The study shall help with ward-level plans for promoting sustainable development in Savar Pourasava.
